

## Main emphasis in international activities is put on:

- ↳ face-to-face tutorials in Germany or abroad
- ↳ full service
- ↳ advice focused on the requirements of the customer
- ↳ individual development of training measures on demand
- ↳ tailor-made conception, organisation and performance of training measures
- ↳ customer-focused support in all problems and demands of the participants during the training
- ↳ looking after the participants also outside the training
- ↳ report to the customer
- ↳ examinations and certification comparable to German standards (e.g. master craftsman examination)
- ↳ support service abroad after the training (if required), e.g. visits of short term experts

Projects are performed world wide. Current cooperations with: Chile, Libya, India, Trinidad & Tobago. In preparation are co-operations with Oman, Malaysia, Taiwan and Turkey.

## OUR NAME IS PROGRAM

QualiTec German Ltd. is a non-profit organisation, founded in the year 2001. Our name points out the combination of qualification (= Quali) and experience in technical fields (= Tec). And this name is our program: we qualify young people and adults for their professional future.

### QualiTec German Ltd.: fast and flexible

QualiTec German Ltd., a subsidiary company of the Aachen Chamber of Skilled Crafts and Trades. The broad offer of technical training measures has been performed for many years in the well-known vocational training centres of the Aachen Chamber of Skilled Crafts and Trades. QualiTec German Ltd. was founded to enable the training centres to act faster and more flexible on the market of vocational training.

### QualiTec German Ltd.: the name stands for international activities

Since the early 1960ies, the Aachen Chamber of Skilled Crafts and Trades qualified thousands of people from all over the world. They completed technical training, management training or were trained as consultants. Responsible for these business activities is now QualiTec German Ltd.. Most of the training measures were performed in form of „train-the-trainer“-programmes; i.e. that the participants not only develop expert competence in the training course, but also are supported in additional courses to build up pedagogical competence. Thus, in many countries of the world, experts having successfully been trained in Aachen train other people professionally in their profession.

## EXPERT TRAINING IN GERMANY

According to the German philosophy behind training courses in technical fields, expert knowledge must always:

- ↳ be based on both: on theory as well as on practical experience,
- ↳ be presented in a non-academic way in form of practical training in which theory is mainly offered in contexts (project work),
- ↳ be understood as a synonym for a broad basis of skills and knowledge so that skilled workers are enabled to adapt quickly to complex issues and new requirements in their job,
- ↳ be oriented at practical tasks in real work places,
- ↳ prove the ability to plan, to perform, and to control entire professional action independently,
- ↳ include the ability to apply acquired skills and knowledge to practical tasks and typical practical problems.

### QualiTec German Ltd.: a well-experienced team

The instructors and teachers of QualiTec German Ltd. are well-experienced experts from practice and work in close contact to companies in industry and skilled crafts. They all come from industry and trades and know how to train in practice for the benefit of practice.

They can teach in English, but are also used to work with interpreters (e.g. Arabian, Chinese, Thai etc.).

That the training facilities of QualiTec German Ltd. are a „centre of excellence“ in many technical fields has been approved meanwhile by the certification according to the international quality standards ISO 9001 : 2000. a certificate that we are proud of.

## THE TRAINING OFFER

Training courses on different levels (apprenticeship, journeyman/skilled worker, master craftsman, bachelor in crafts, and of course according to any customers' specifications) are offered in:

- ↳ electrical engineering / electronics
- ↳ mechanical engineering
- ↳ CNC
- ↳ PLC
- ↳ automation techniques / IT
- ↳ welding (test laboratories available) and plastic processing
- ↳ car mechanics
- ↳ mechatronics
- ↳ energy and environment techniques
- ↳ building trades and finishing trades
- ↳ economics / management training / educational theory for technicians
- ↳ design in crafts and trades
- ↳ etc.

The vocational training centres are well equipped. 1.300 places for practical training, 1.000 classroom or computer places are available.

In the average of the last years, the 200 employees and approx. 200 freelance workers have supported 14.000 participants p.a. in approx. 2 million lesson/participant hours.
